

	POLICY	AIMGI1 R 02 del 01/12/2020
Portogruaro (VE) - Italy		

Statement of Quality, Environment, Health and Safety

The FAID ANTICORROSIONE SRL, present in the market since 1974, strong in the application of any paint cycle on metal and non-metallic structures, specialized over the years also in the metallization and waterproofing treatments, operating, in addition, in the foreign market, assumes the following principles as strengths of their business.

The Management communicates the desire to consider the integrated system for quality management ISO 9001: 2015 and environment ISO 14001: 2015 a starting point and not a point of arrival.

The Management is also committed to addressing the health and safety aspects of all existing business activities and future planning, as important aspects of its business.

The policy is to support company development and demonstrate the organization's ability to constantly provide the service in compliance with customer requirements and those established by laws, regulations or other mandatory requirements and considers to establish, with this document, the their own guidelines for achieving it.

To do this it is essential to improve the company's competitiveness by addressing to customers by guaranteeing:

a service that respects the specifications set by customers

through effective and efficient management of all business processes

That will be a common will:

- constantly improve relations with customers through compliance with the specific requirements;
- provide a service that fully satisfies the needs of its customers in compliance with current laws and regulations;
- prevent and reduce the impacts on the environment, through the environmental management that aims to:
 - promote and suggest to the customer the utilization of raw materials that have an environmental sustainability;
 - collaborate with suppliers careful about the environmental impacts resulting from their activities;
 - promote the separate collection of wasters;
 - make a constant monitoring of natural resources (water, energy, GPL) used in the processes;
 - pay constant attention to compliance with the regulations on emissions into the atmosphere and external noise;
- prevent the occurrence of accidents and the onset of occupational diseases, guaranteeing:
 - compliance with the relevant legislation in force;
 - specific information / training / training for all workers with specific reference to the job performed;
 - the consultation and involvement of workers also through the Workers' Safety Representative;
 - machines, plants and equipment, workplaces, operating methods and organizational aspects are implemented in order to safeguard the Health and Safety of workers, third parties and the community in which the company operates;
 - periodic internal investigations in order to identify any preventive actions so as to significantly reduce the likelihood of accidents occurring and any occupational diseases;
 - periodic review of policy and objectives in order to achieve continuous improvement in safety and health at work in the company;
 - that the whole organization is involved in the improvement of the SGSSL according to the role covered
- to involve all personnel in order to pursue the goal of maintaining and continuously improving the integrated system and health and safety aspects
- to spread "risk-based thinking" within the company, in order to contain risks to acceptable levels and exploit the opportunities offered by the market

Therefore the management of the process activities are aimed at the continuous improvement of the company management system.

The Management intends to guarantee the achievement of its own "mission" which it deems valid and actual until a new document is issued and undertakes to define and measure the results of the activities based on the achievement of the set objectives.
